Climate change over the past 1000 years as shown by the IPCC

The Hockey Stick Chart

Do We Have a Climate Crisis?

- Biblical Mandate
- The Global Warming (GW)/CC Claims
- Some Climate Change (CC) Facts
- Greenhouse Effect
- Greenhouse Gases
- **UN IPCC (Intergovernmental Panel on CC)**
- **NIPCC (Nongovernmental International Panel on CC)**
- **Consideration of 16 Key Issues**
- Benefits of Warming and More CO₂
- What Do The Experts Say?
- In Conclusion

IPCC
INTERGOVERNMENTAL
PANEL ON
CLIMATE CHANGE

Biblical Mandate

- Be fruitful and multiply and fill the earth and subdue it, and have dominion over the fish of the sea and over the birds of the heavens and over every living thing that moves on the earth. **Gen. 1:28**
- While the earth remains, seedtime and harvest, cold and heat, summer and winter, day and night, shall not cease. **Gen. 8:22**
- But test everything; hold fast what is good. **1 Th. 5:21**

UN IPCC Claims

- Intergovernmental Panel on Climate Change (**IPCC**)
- GW occurring at a rapid rate
- Largely due to increased burning of fossil fuel
- Must cut back on CO₂ released into atmosphere
- Representatives of 190+ nations meet annually
- 6 IPCC reports issued over last 30+ years
- Claims refuted by Nongovernmental International Panel on Climate Change (**NIPCC**)
 - Nature, not human activity, rules the climate

The Manmade GW/CC Claims

■ Predicted by the UN IPCC

- Real & human-caused
- +5 degrees C by 2100
- Arctic ice cap disappearing
- Polar bear population will decline
- Sea level will rise by 88+ cm in 2100
- Increased drought, extreme weather, more storms, heat waves, more wildfires, etc.
- Most significant threat to mankind
- Must act NOW!

“Before this century is over, billions of us will die ... “

James Lovelock, scientist

Figure 1: The greenhouse effect

(Modified from IPCC 2007)

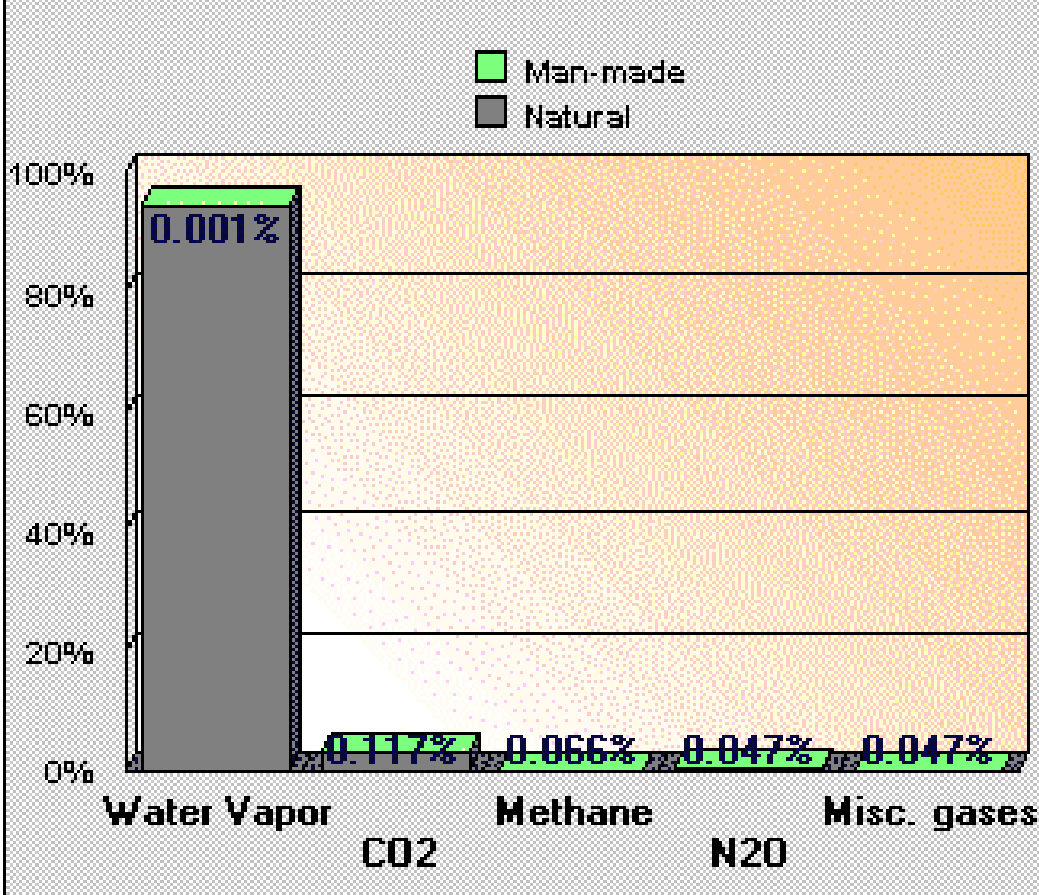

Anthropogenic Contribution

Anthropogenic (man-made) Contribution to the "Greenhouse Effect," expressed as % of Total (water vapor INCLUDED)

Based on concentrations (ppb) adjusted for heat retention characteristics	% of All Greenhouse Gases	% Natural	% Man-made
Water vapor	95.000%	94.999%	0.001%
Carbon Dioxide (CO ₂)	3.618%	3.502%	0.117%
Methane (CH ₄)	0.360%	0.294%	0.066%
Nitrous Oxide (N ₂ O)	0.950%	0.903%	0.047%
Misc. gases (CFC's, etc.)	0.072%	0.025%	0.047%
Total	100.00%	99.72	0.28%

Greenhouse Gases (with Water Vapor)

**Contribution to the Greenhouse Effect
(Including water vapor)**

Greenhouse Gases

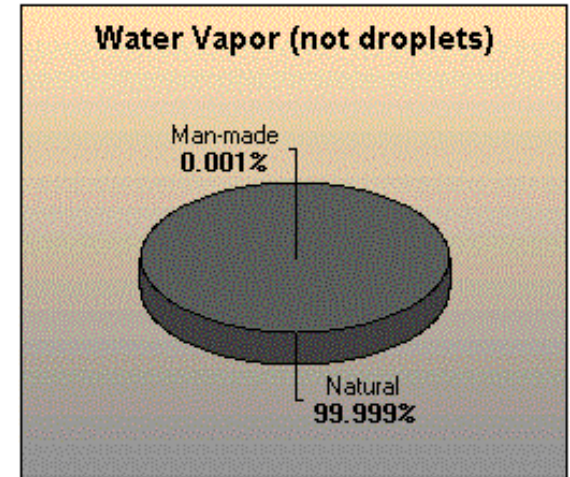

Water vapor & clouds ~95%
 Carbon dioxide [CO₂] ~3.6%
 Methane [CH₄] ~0.36%
 Nitrous Oxide [N₂O] ~.95%
 Miscellaneous Gases ~.07

Human contribution to greenhouse effect = 0.28%

Natural & Manmade Sources

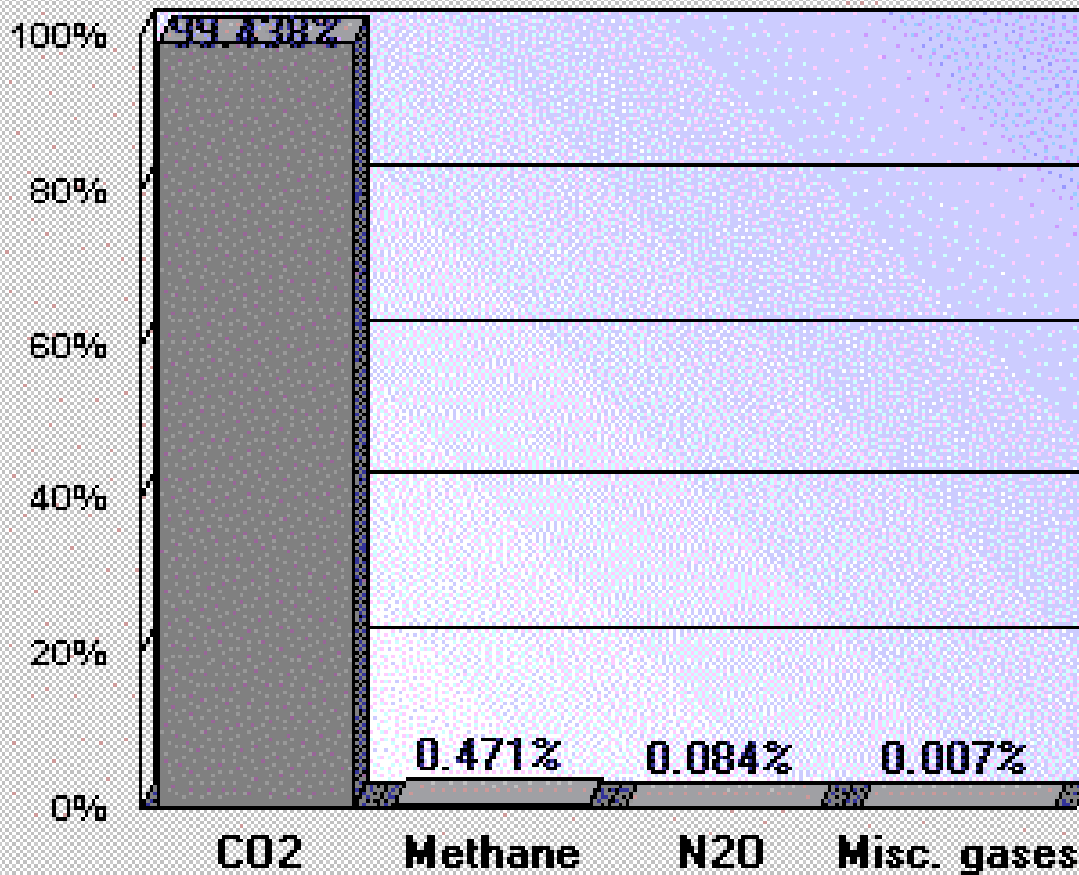

Contribution to the "Greenhouse Effect"
(Natural and Man-made Sources)

Man-made CO₂ contributions cause only about **0.117%** of Earth's greenhouse effect, (factoring in water vapor). This is insignificant!

Greenhouse Gases (no Water Vapor)

Greenhouse Gas Concentrations (% of total)
Natural and Man-made Sources (except water vapor)

The Science is Not Settled

Botched Predictions for 2015

- Predictions by Dr. Paul Ehrlich, **Dr. John Holdren** [Obama's Science Advisor], the UN
 - Made in **1970's** and **1980's** about **Global Cooling**
- All came to naught:
 - UN overestimated GW by 2015
 - All Rainforest Species Will Be Extinct
 - Oil will run out by 2015
 - Arctic sea ice will disappear by 2015
 - Looking to the future: A billion people could die from climate change by 2020
- **Holdren in 1971: “new ice age likely”**

■ Published reports

- Nature, Not Human Activity, Rules the Climate
- Climate Change Reconsidered I and II
- Scientific Critique of IPCC's 'Summary for Policymakers
- Why Scientists Disagree About GW (2nd Edition)

Second Edition of NIPCC Book

NIPCC Key Findings

- No consensus
- Why scientists disagree
- Scientific method vs. political science
- Flawed projects
- False postulates
- Unreliable circumstantial evidence
- Policy implications

Specific Claims in WA Senate Bill 5802: Refuted by Easterbrook (Climate Scientist)

1. Emissions of greenhouse gases from human activities is the principal cause of climate change.
2. Sea level is rising at an increasing rate because of GW
3. The frequency of severe storms is increasing because of GW
4. Reduced winter snow packs and decreased summer streamflows
5. Increasing acidification of the state's marine waters
6. Produce more electricity from renewable energy while phasing out coal-powered electricity generation

Issue #4

CO2 Cannot Drive Global Warming

Possible Global Warming Causes

- A. Increased **CO2** in atmosphere?
 - Insignificant **GHG**, follows **GW**
- B. **GW** by Sunspots Only?
 - Influence too small by themselves
- C. Solar Irradiance? ← **Most Likely!**
 - Cloud Cover increase -> Cooling
 - Galactic Cosmic Radiation (**GCR**)
- D. Pacific Decadal Oscillation (**PDO**)?
 - Occurs every 30 years in North Pacific Ocean

A. Evidence for GW by CO2?

- The greenhouse gas signature missing
 - No telltale “hotspot” warming pattern
- Vostoc ice cores do not show **CO2** pushing up temperatures
 - Increased temperatures **800 years before CO2**
- Temperatures are not rising
 - Since 1999 temperatures have been flat
- CO2 already doing almost all the warming it can do
 - Twice the CO2 does not make twice the difference

The Skeptic's Handbook, Joanne Nova 2009

Impact of Adding CO₂ (adapted)

Atmospheric Absorption Bands

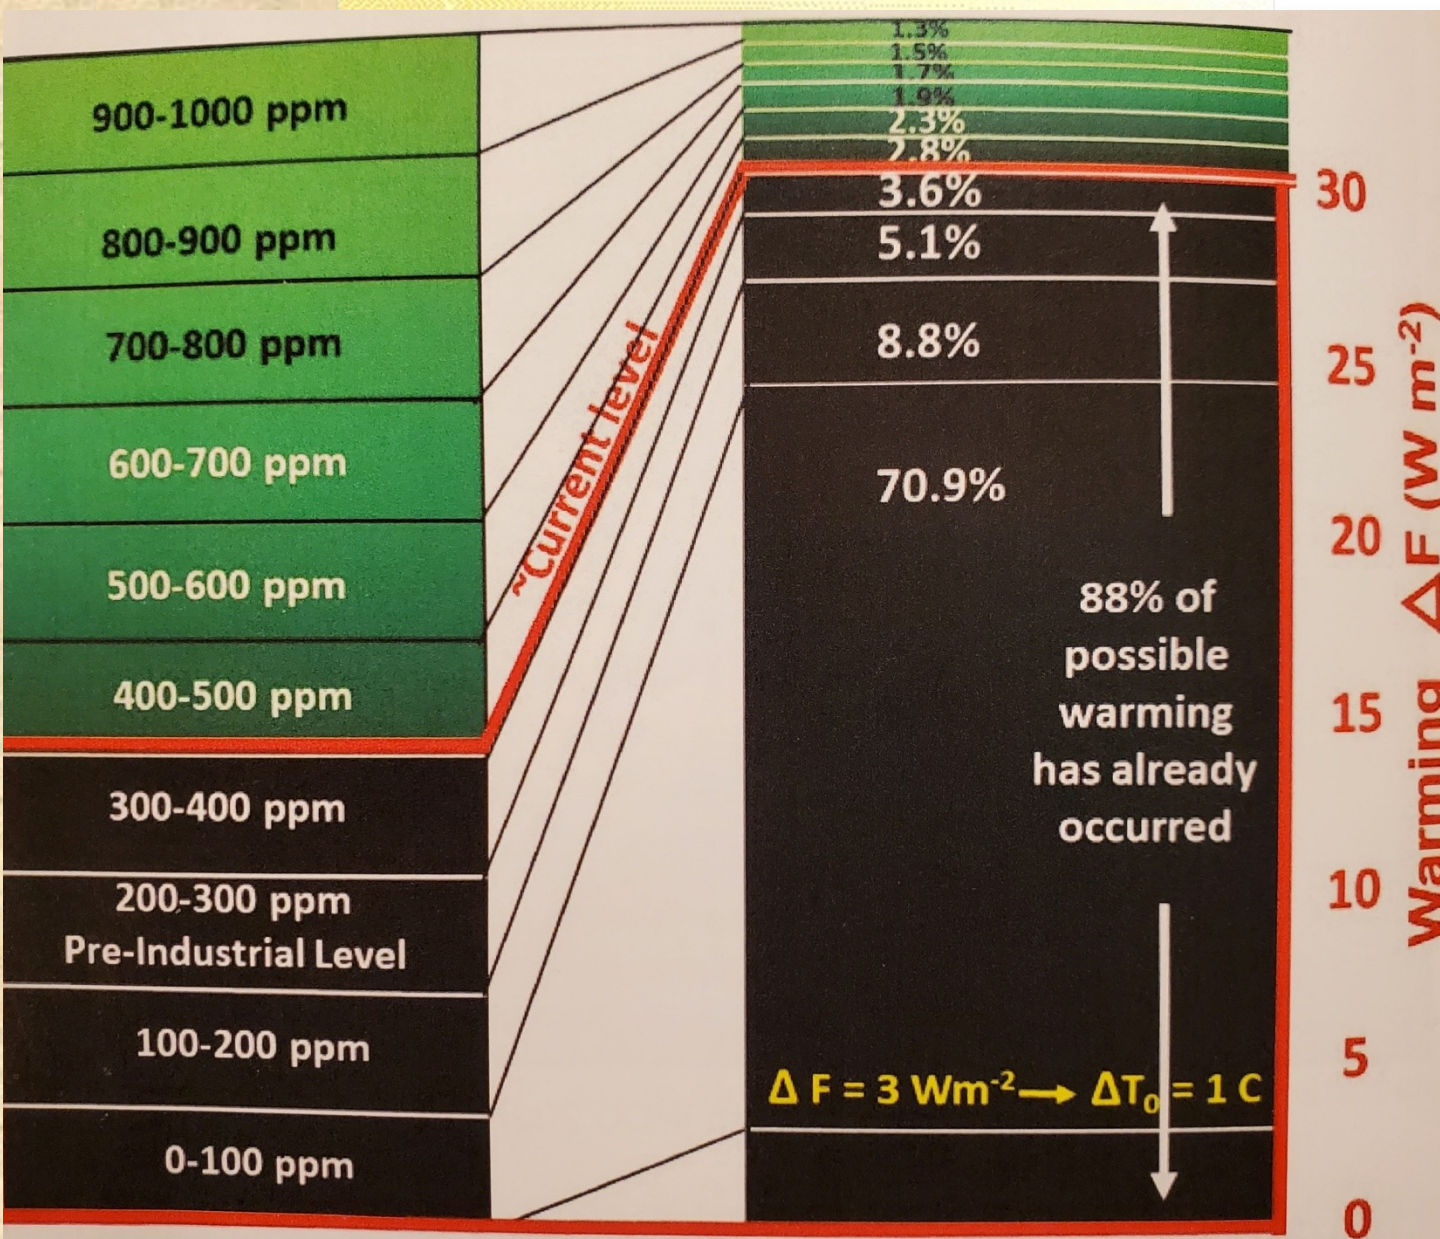

Radiation Transmitted by the Atmosphere

This graph shows the fraction of radiation absorbed or scattered on a vertical path from the top of Earth's atmosphere to the surface, or vice versa. The horizontal scale is the wavelength of the radiation.

The smooth curves on the top panel are "Planck intensities" for various temperatures, 5525 K, the effective temperature of the Sun's surface (red) and the much lower temperatures of Earth's surface, about 210 K (black) for the South Pole and 310 for a warm day in Phoenix (violet).

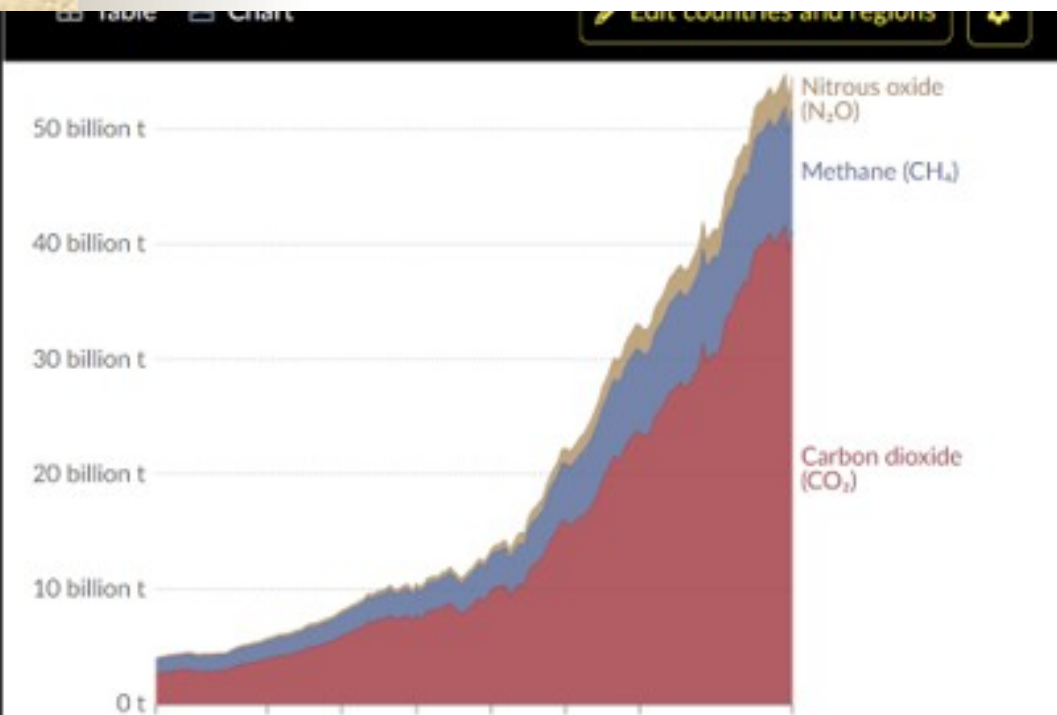

Most sunlight (red) is transmitted, only about a quarter of the thermal cooling radiation (blue) is transmitted because of absorption by greenhouse gases, shown in the lower panels.

The Warming Impact of CO2

(The warming (ΔF) from CO₂ of concentration c is described by the formula $\Delta F = \delta F \log^2 (1 + c/c_0)$ for the top of the atmosphere.)

Tons of GHG Added to Atmosphere

2021
in tonnes

Nitrous oxide (N ₂ O)	2.97 billion t
Methane (CH ₄)	10.51 billion t
Carbon dioxide (CO ₂)	41.12 billion t
Total	54.59 billion t

The header features a collage of nature scenes: a white star-shaped flower on the left, a green fern in the center, and a blue sky with white clouds on the right.

Issue #5

Total Solar Irradiation (TSI) Can Cause Significant Fluctuations in the Climate

B. GW by Sunspots Only?

Temperature, CO₂, and Sunspots

Temperature Correlation With Sun

C. Total Solar Irradiance?

The following charts show clearly that climate change seems to be directly correlated to Solar Irradiance, rather than CO₂, as the "Global Warming Crisis" alarmist crowd would have you think.

Ocean Warming Minimal

Issue #7

Full Implementation of the Paris
Climate Agreement Would Have
Almost No Effect on the
Climate, Even by 2100

Paris Climate Agreement

- Work of the UN Framework Convention on CC
- Deals with Green House Gas emissions mitigation, adaptation and finance
- Adopted on December 12, 2015
- Start planned for 2020
- Signed by 195 nations, ratified by 144
- Implementation implications
 - Prevent 0.306 degrees Fahrenheit of GW by 2100
 - At a cost of \$65 to \$132 Trillion, 2030 to 2100

COP21 final deal: Key points...

- COP21 President Laurent Fabius says text is "differentiated, balanced, durable and "legally-binding"
- Text "emphasises" need to keep warming "well below 2C"
- ... And "Pursuing" efforts to keep warming "below 1.5C"
- 5-year 'stocktake' of how countries are doing on their climate plans
- Issues of 'Differentiation' and 'Loss & Damage' included
- No clear timescale of when fossil fuels must be phased out

SIX KEY POINTS OF THE PARIS CLIMATE AGREEMENT

The 31-page document that details a landmark agreement reached in Paris on 12 December 2015 could be a turning point in the struggle to contain global warming. The historic pact, approved by 195 countries, will take effect from 2020.

To keep global **temperature** increase below 2C (3.6F) and to pursue efforts to limit it to 1.5C.

186 countries submitted plans detailing how they reduce their **greenhouse gas pollution** through 2025 or 2030.

Overall assessment of how countries are doing in cutting their emissions compared to their **national plans** – starting in 2023, every five years.

\$100 billion a year in climate finance for developing countries by 2020, with a commitment to further finance in the future.

Rich countries to engage in absolute reductions in emissions, developing ones to continue enhancing their mitigation efforts.

Countries should reach global peaking of **greenhouse gas emissions** as soon as possible.

Source: UNEP, Global Trends in Renewable Energy Investment 2015

Emissions Targets for USA & China

- The Obama administration agreed to an economy-wide target of reducing U.S. greenhouse gas (82% of which is carbon dioxide (CO₂)) emissions by 26%-28% below its 2005 level in 2025.
- China agreed “to achieve the peaking of CO₂ emissions around 2030” and to other measures such as those designed to increase the share of non-fossil fuels in primary energy consumption. Taking into consideration expected economic growth in China and other factors, their target translates into about a 70% *increase* above its 2005 level in 2025.

Sea Level Unaffected by CO2

Sea Level Rise Reality

In the last 140 years, since 1880, we have increased CO2 by 38%, yet the predicted sea rise hasn't happened. Look at Wismar, Germany? Wismar sits on the Mecklenburg Bend, in the Baltic Sea. It is halfway between Norway and Sweden, and the Netherlands. Both Norway and Sweden are actually rising, and have been doing so since the last Glacial Maximum, as melting ice removed weight. So, people in Norway are saying, "Hey, sea levels are falling!" Well, no, their land is rising. Then on the other side, you have Holland and Belgium. Here, the land is in fact sinking. It's like a seesaw. Norway goes up, Holland goes down.

Issue #14

UN IPCC Charter Limits It To Identifying Only Human Causes of Global Warming

UN IPCC Charter

The [Intergovernmental Panel on Climate Change] IPCC's charter

from the outset has been ”to assess on a comprehensive, objective, open and transparent basis the scientific, technical and socio-economic information relevant to understanding the scientific basis of risk of human-induced climate change, its potential impacts and options for adaptation and mitigation. IPCC reports should be neutral with respect to policy. ... may need to deal objectively with scientific, technical and socio-economic factors relevant to the application of particular policies.”

UN IPCC Reports

- Report #1 in 1990: Ignored satellite data (showed no warming)
- Report #2 in 1995: Significant alterations after approval by scientists
- Report #3 in 2001: Claimed 20th century showed “unusual warming”
- Report #4 in 2007: Completely devaluated climate changes in solar activity
- Report #5 in 2014: Confidence increased to 90-95% despite no global warming for 15 years
- Report #6 in 2021-3: Science, Impacts, Vulnerability, Mitigation, Synthesis, Assessment

Issue #15

UN IPCC Officials Admit That
Its Real Agenda Is To
Redistribute Wealth

UN IPCC Reality

“We (**UN-IPCC**) redistribute de facto the world’s wealth by climate policy...”

“One has to free oneself from the illusion that international climate policy is environmental policy. This has almost nothing to do with environmental policy anymore...”

-Dr. Ottmar Endenhofer, IPCC co-chair of Working Group 3, November 13, 2010 interview [H/t Dr. Charles Battig]

Redistribution of Wealth

Climate policy used to impose Marxism

"But one must say clearly that we redistribute de facto the world's wealth by climate policy. Obviously, the owners of coal and oil will not be enthusiastic about this. One has to free oneself from the illusion that international climate policy is environmental policy. This has almost nothing to do with environmental policy anymore, with problems such as deforestation or the ozone hole."

Ottmar Edenhofer, Interview with Bernard Potter in *Neue Zürcher Zeitung* (New Zurich Times), 14 Nov 2010.

Issue #16

The Alleged “97 % Consensus of Scientists” Is Bogus

The 97% Claim – False!

- “Probably the most widely repeated claim in the debate over global warming is that “97 percent of scientists agree” that climate change is man-made and dangerous. This claim is not only false, but its presence in the debate is an insult to science.”
 - *Why Scientists Disagree About GW*, pg. 1 [Introduction].
- “In May 2014, Secretary of State John Kerry warned graduating students at Boston College of the “crippling consequences” of climate change. “Ninety-seven percent of the world’s scientists tell us this is urgent,” he added (Kerry, 2014). Three days earlier, President Obama tweeted that “Ninety-seven percent of scientists agree: #climate change is real, man-made and dangerous” (Obama, 2014). What is the basis of these claims?”
 - *Why Scientists Disagree About GW*, pg. 8.

Consensus on Consensus – Cook, 2016

- Seven climate consensus studies

- Oreskes 2004, **Doran 2009**,
Anderegg 2010, Cook 2013,
Verheggen 2014, Stenhouse 2014,
Carlton 2015

- Two key conclusions:

- 1) Depending on exactly how you measure the expert consensus, it's somewhere between 90% and 100% that agree humans are responsible for climate change, with most of our studies finding 97% consensus among publishing climate scientists.
- 2) The greater the climate expertise among those surveyed, the higher the consensus on human-caused global warming.

Studies into scientific agreement on human-caused global warming

Why Scientists Disagree on GW, pg. 8ff

e.g. Doran Survey Bias

- Doran/Zimmerman 2009 two-question survey:
 - “Q1. When compared with pre-1800s levels, do you think that mean global temperatures have generally **risen**, fallen, or remained relatively constant?”
 - Q2. Do you think human activity is a **significant** contributing factor in changing mean global temperatures?”

- Survey sent to 10,257 Earth scientists

Why Scientists Disagree on GW, pg. 13-14

- Limited to academic, government workers
- **Solar scientists & meteorologists excluded**
- Responses from 3,146
- Q1 – risen 90+
- Q2 – yes 82

- Survey results considered

- 79 who listed climate science as their area of expertise, and 50%+ of recent papers on climate science
- Asked wrong questions of wrong people

Doran GW Survey Results

Benefits of Warming & More CO₂

- Fewer natural disasters and disaster deaths
- Global warming saves lives
- Declining droughts benefit humanity
- Reduced wildfires
- Increased food production
- A greener planet
- Reduced extinctions
- Adaptation rather than expensive mitigation

Global Annual Death Rate From Natural Disasters

Global annual death rate from natural disasters

Global death rate measured as the number of deaths per 100,000 of the world population
(by decade 1900s to 2000s; and six years from 2010)

Data source: OFDA/CRED International Disaster Database – www.emdat.be – Université Catholique de Louvain – Brussels – Belgium.
The author Max Roser licensed this visualisation under a CC-BY-SA licence. You are welcome to share but please refer to its source where you find more information: <https://ourworldindata.org/natural-catastrophes/>

Global annual deaths from natural disasters, by decade

Absolute number of global deaths from natural disasters, per year.

This is given as the annual average per decade (by decade 1900s to 2000s; and then six years from 2010-2015).

Source: EMDAT (2017): OFDA/CRED International Disaster Database, Université catholique de Louvain – Brussels – Belgium. The data visualization is available at [OurWorldinData.org](https://www.ourworldindata.org). There you find research and more visualizations on this topic.

Average annual global deaths from natural disasters by decade, 1900-2015²

Climate-related Deaths: 1920-2023

Deaths have declined 97+% because richer, smarter and more resilient societies reduce disaster deaths. This swamps any potential climate signal

OFDA/CRED International Disaster Database Jan 1, 2024, <https://public.emdat.be>, deaths averaged over decades 1920-29, 1930-1939, ... 2010-2019 placed at decadal midpoints (1924.5, 1934.5 etc), with average data for 2020-23 placed at 2022. Update of Fig. 17 from <https://www.sciencedirect.com/science/article/pii/S0040162520304157>.

10x more Cold Deaths than Heat Deaths in Europe

On the left, how it is presented, on the right with equal axes

2023 paper: "Excess mortality attributed to heat and cold: a health impact assessment study in 854 cities in Europe" based on 2000-19 data, [www.thelancet.com/journals/lanph/article/PIIS2542-5196\(23\)00023-2/fulltext](http://www.thelancet.com/journals/lanph/article/PIIS2542-5196(23)00023-2/fulltext), Figure 3 left, Figure 3 with equal axes for rates of heat deaths (red) and cold death (blue) on right. twitter.com/bjornlomborg

Globally Increasing Precipitation

Precipitation Worldwide, 1901–2021

Data source: NOAA (National Oceanic and Atmospheric Administration). 2022. Extended version of GPCP dataset originally published in: Blunden, J., and T. Boyer (eds.). 2021. State of the climate in 2020. B. Am. Meteorol. Soc. 102(8):Si-S475. <https://doi.org/10.1175/2021BAMSStateoftheClimate.1>

How CO₂ As Plant Food Works

More CO₂ greatly benefits plants because:

- 1. They need less water if there is more CO₂.**
- 2. More CO₂ suppresses harmful photorespiration.**

Virginia - Corn yield bushels/acre

Average Corn Yields in the US

Here is what happens with more CO2

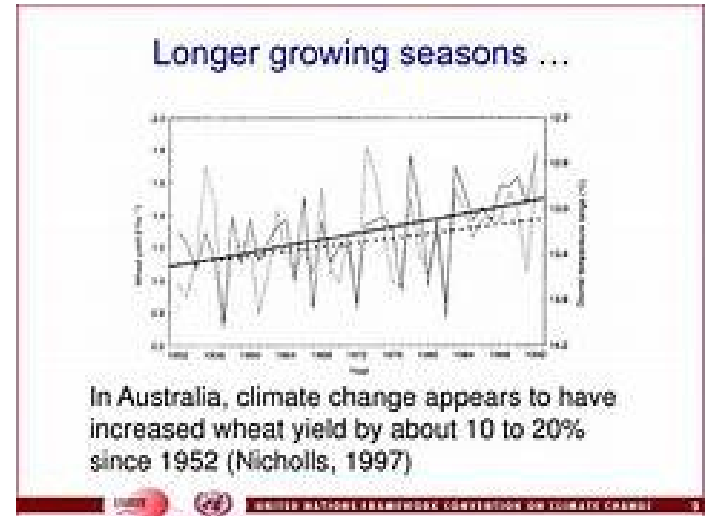

385 ppm

535 ppm

685 ppm

835 ppm

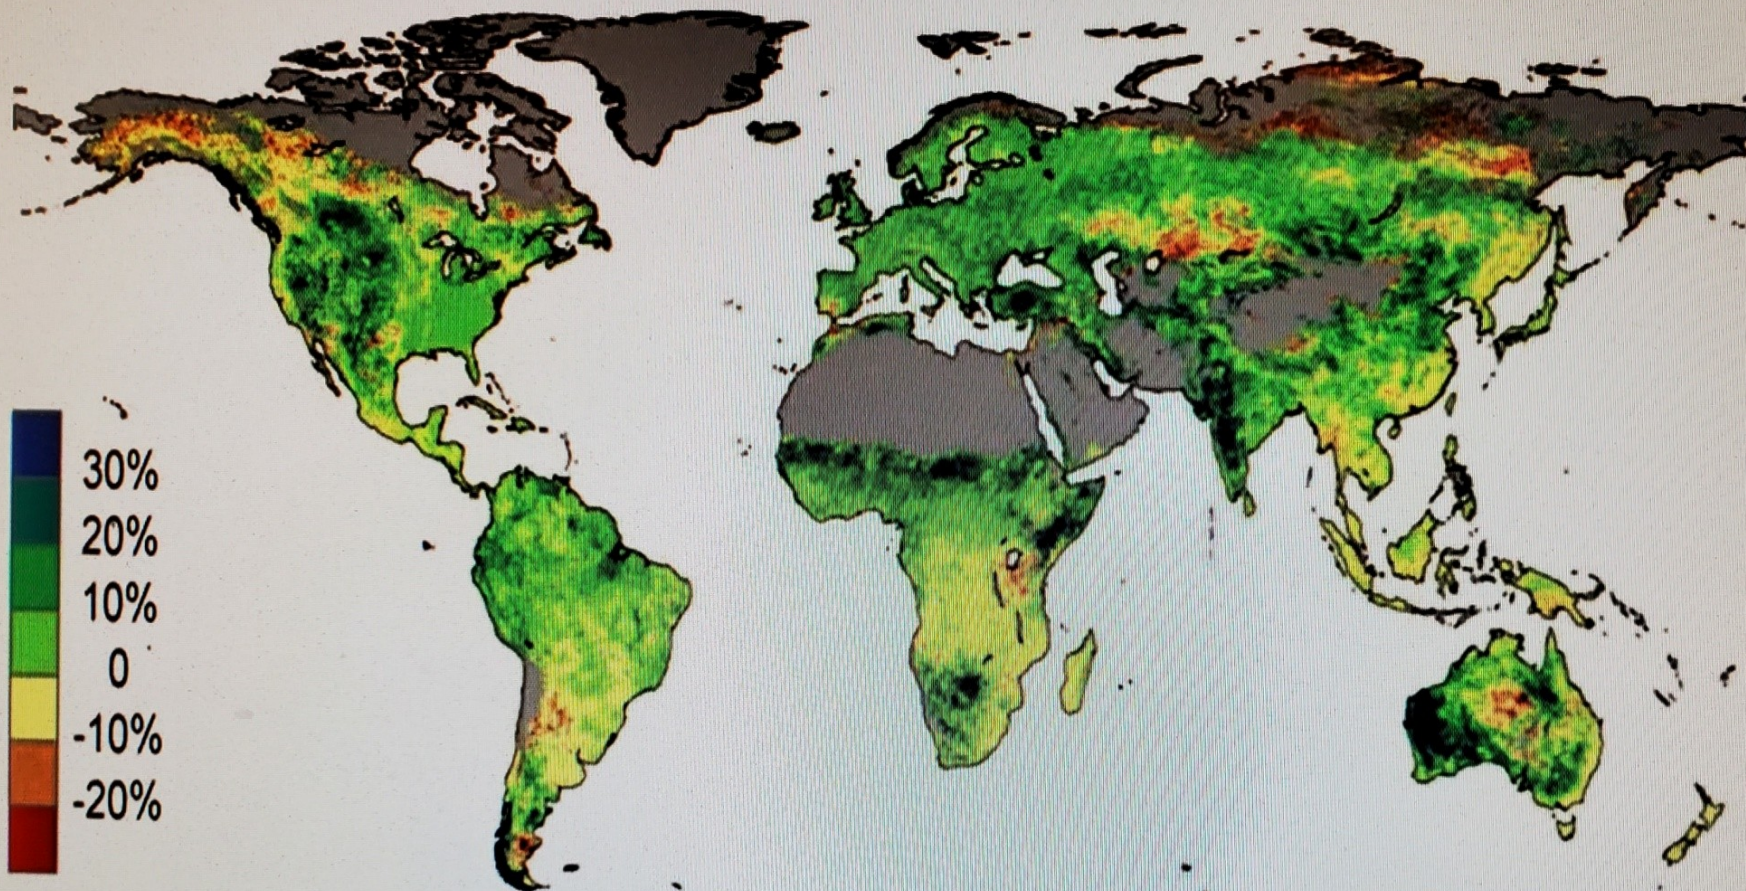

Increased Growing Season & A Greening Planet

Observed Increase in Frost-Free Season Length

Global Greening From CO2 Fertilization: 1982-2010

Increase = 11% in areas studied

CO2 and Human Welfare

Figure 16: Carbon dioxide and human welfare.

(a) World and (b) China. Updated from Goklany (2012a). Indicators of human welfare are: changes in GDP (per capita at PPP in 2011 USD), population and life expectancy. Carbon dioxide is represented by changes in emissions per capita and global concentration. All changes versus 1800 value, or nearest alternative date. Note that in 1800, emissions per capita were negligible. Sources citation in main text.

- Changes in carbon dioxide:**
- Concentration (ppm)
- Emissions per capita (t carbon)
- Changes in human welfare:**
- Life expectancy
- Per-capita GDP (000 2011\$)
- Population (billions)

What Do The Experts Say?

CO2 Coalition

- Established in 2015 for the purpose of educating thought leaders, policy makers, and the public about the important contribution made by carbon dioxide to our lives and the economy.
- Prominent members include:
 - William Happer, PhD in Physics from Princeton
 - John Clauser, **PhD & Nobel Prize in Physics in 2022**
 - Patrick Moore, Co-Founder Greenpeace
 - Gregory Wrightstone, MS in Geology – Exec. Director
 - Richard Lindzen, PhD in Physics from Harvard
 - Roy Spencer, PhD in Meteorology
 - William van Wijngaarden, PhD in Physics

Dr. William Happer's View

- Basic science shows **increasing levels of CO₂, N₂O, and CH₄** will not cause a “climate emergency.” This is another “extraordinary popular delusion and madness of crowds” in the sad history of human lust for money and power, folly and cowardice.
- More **CO₂** will **benefit life on Earth** because of its value to agriculture, forestry and photosynthetic life.
- More **N₂O** and **CH₄** will have **negligible effects** on Earth's climate.
- Rational people need to push back against climate fanaticism, which is not based on science at all. Appeasement will not work.

Dr. William Happer — 1/25/25

“Those who think that way, in many cases, mean very well. But they have been misled. As a scientist who actually knows a lot about climate (and I set up many of our climate research centers when I was at the Department of Energy in the early 1990s) I can assure you that there is no climate emergency. There will not be a climate emergency. ... Policies to address this phony climate emergency will cause great damage to American citizens and to their environment.”

Dr. William Happer — 1/25/25

- By far, water vapor is the dominant greenhouse gas. Carbon dioxide is secondary and decidedly minor. Happer illustrates that each primary greenhouse gas prevents certain wavelengths from freely escaping to space. He adds that:
- *“This keeps Earth’s surface temperature warmer than it would be (by about 20 or 30 degrees). [C or about 35 to 55°F] The Earth would be an ice cube if it were not for water vapor and CO₂; and when I say water vapor, you should understand that I really mean water vapor and clouds, the condensed form of water. Clouds are at least as important as greenhouse gases, and they are very poorly understood to this day.”*

Climate Regulations Based on a “Hoax”

- Two prominent climate scientists have taken on the EPA new rules to cut CO₂ emissions in electricity generation, arguing that the regulations “will be disastrous for the country, for no scientifically justifiable reason.”
- **William Happer** and **Richard Lindzen** argued that the claims used by the EPA to justify the new regulations are based on political opinions and speculative models that have consistently proven to be wrong.
- “The scientific method proves there is no risk that fossil fuels and carbon dioxide will cause catastrophic warming and extreme weather.”

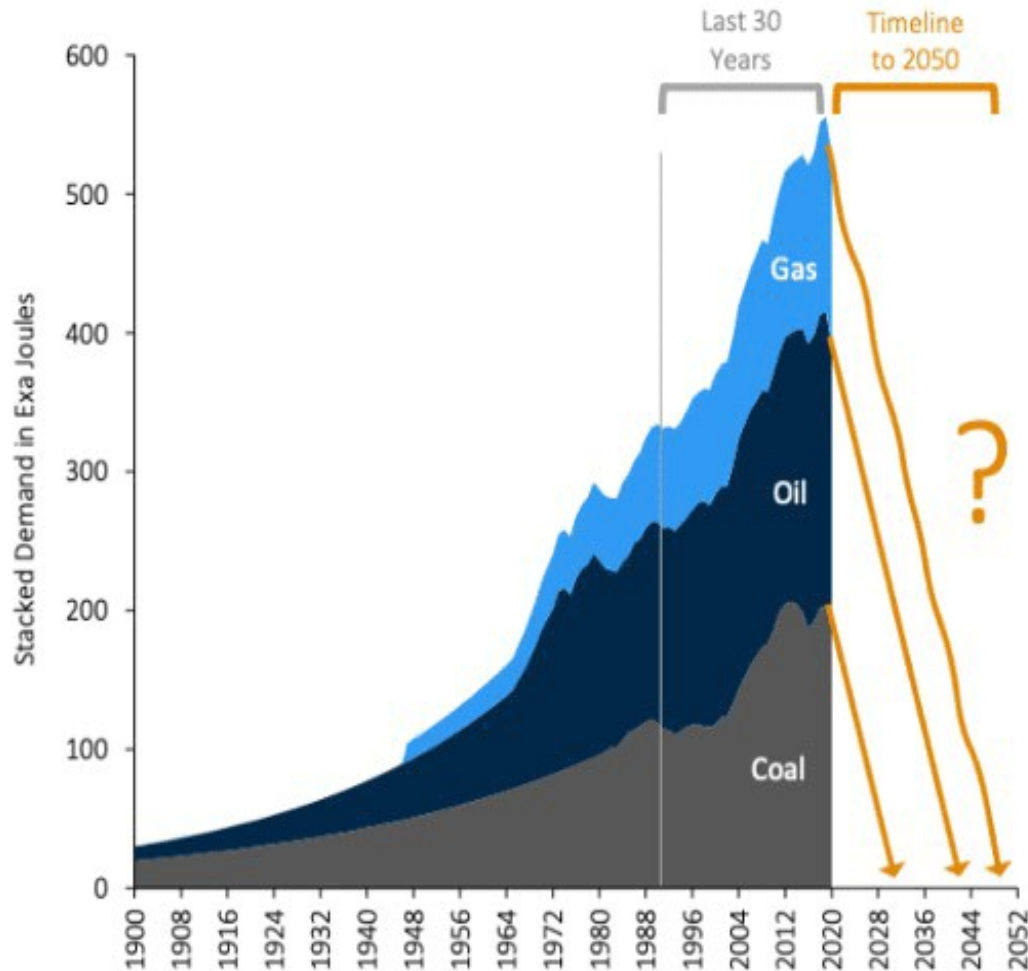

Steve Koonin, PhD Physics — 1/18/25

- Koonin then shows that 73 models overestimate the warming of the globe. These models are the ones cited by the UN Intergovernmental Panel on Climate Change and its collaborators as proof of human caused global warming. One problem that Koonin discusses is the **failure of the models to correctly forecast clouds**. As Koonin states:
- *“Natural fluctuations in the height and coverage of clouds have at least as much of an impact on the flows of sunlight and heat as do human influences. But how can we possibly know global cloud coverage say 10, let alone 50 years from now? Obviously, we can’t. But to create a climate model, we have to make assumptions. That’s a pretty shaky foundation on which to transform the world’s economy.*

Global Energy Needs Won't Disappear Overnight

Traditional Energy Demand

In Conclusion

- UN IPCC CC models have failed miserably
- Sea levels only increased 1.5 mm per decade
- **Man-made causes** are insufficient
 - CO₂ & CH₄ components of GHG have small effect
- **Natural causes** of CC are more credible
 - Sun energy alone is insufficient
 - Cosmic radiance with sunspots can explain CC
 - Pacific Decadal Oscillation may explain CC
- Paris Climate Agreement **NOT** a solution for a **non-existent problem**
- Benefits of Warming and More CO₂

What News Media Isn't Telling You

- Global Warming from 1978 to 1998 has been replaced by Global Cooling (~20 years)
- The Antarctic ice sheet is growing, not melting
- Sea level is rising 7" per century, not 20 ft.
- Some snowfall records set in the past 10 years
- CO₂ & CH₄ **cannot** cause much global warming
- Clouds, sun cycles, ocean currents, volcanoes (all natural) **can and do** control climate change
- Severe storms **are not** more frequent than normal

What Should the Church Do About GW?

- Commit to viewing the world from God's perspective
- Understand and rely on Scripture as a foundation for life
- Use the Bible to understand the world and evaluate all problems
- Help inform other believers
- Promote the truth and oppose false beliefs with gentleness and respect

Gen. 8:22, *While the earth remains, seedtime and harvest, cold and heat, summer and winter, day and night, shall not cease.*

Climate Change is NOT a Crisis
Let's Not Panic!

Thank you
for your
attention!

Reasons Secular Scientists Think Earth's Climate is Unstable

1. Faulty computer climate models
 - Feedback – positive or negative?
2. Fraudulent politicized research
 - Use of surface vs. satellite temperature measurements
 - Cherry-picked data
 - Manipulated data
3. Dependence on the Milankovitch theory

All 4 US Drought Cycles in Sync

All 4 US Drought Cycles are in Synchronization for the First Time Since 1944:

Five Key Climate Questions

- Is the world warming?
 - *Yes, but historic record likely overstated, and there has been no warming in last 10 years*
- Is that warming due to man's CO₂?
 - *Likely “some,” but probably not “most”*
- Will future man-made warming be substantial?
 - *Perhaps a degree, at most, over the next century*
- Will we see catastrophic effects from warming?
 - *Likely not – we have not seen them so far*
- Do CO₂ abatement laws like cap-and-trade make sense?
 - *Costs far more than it helps. Many more important priorities. Carbon tax better than cap-and-trade.*

Metals Demand 2022

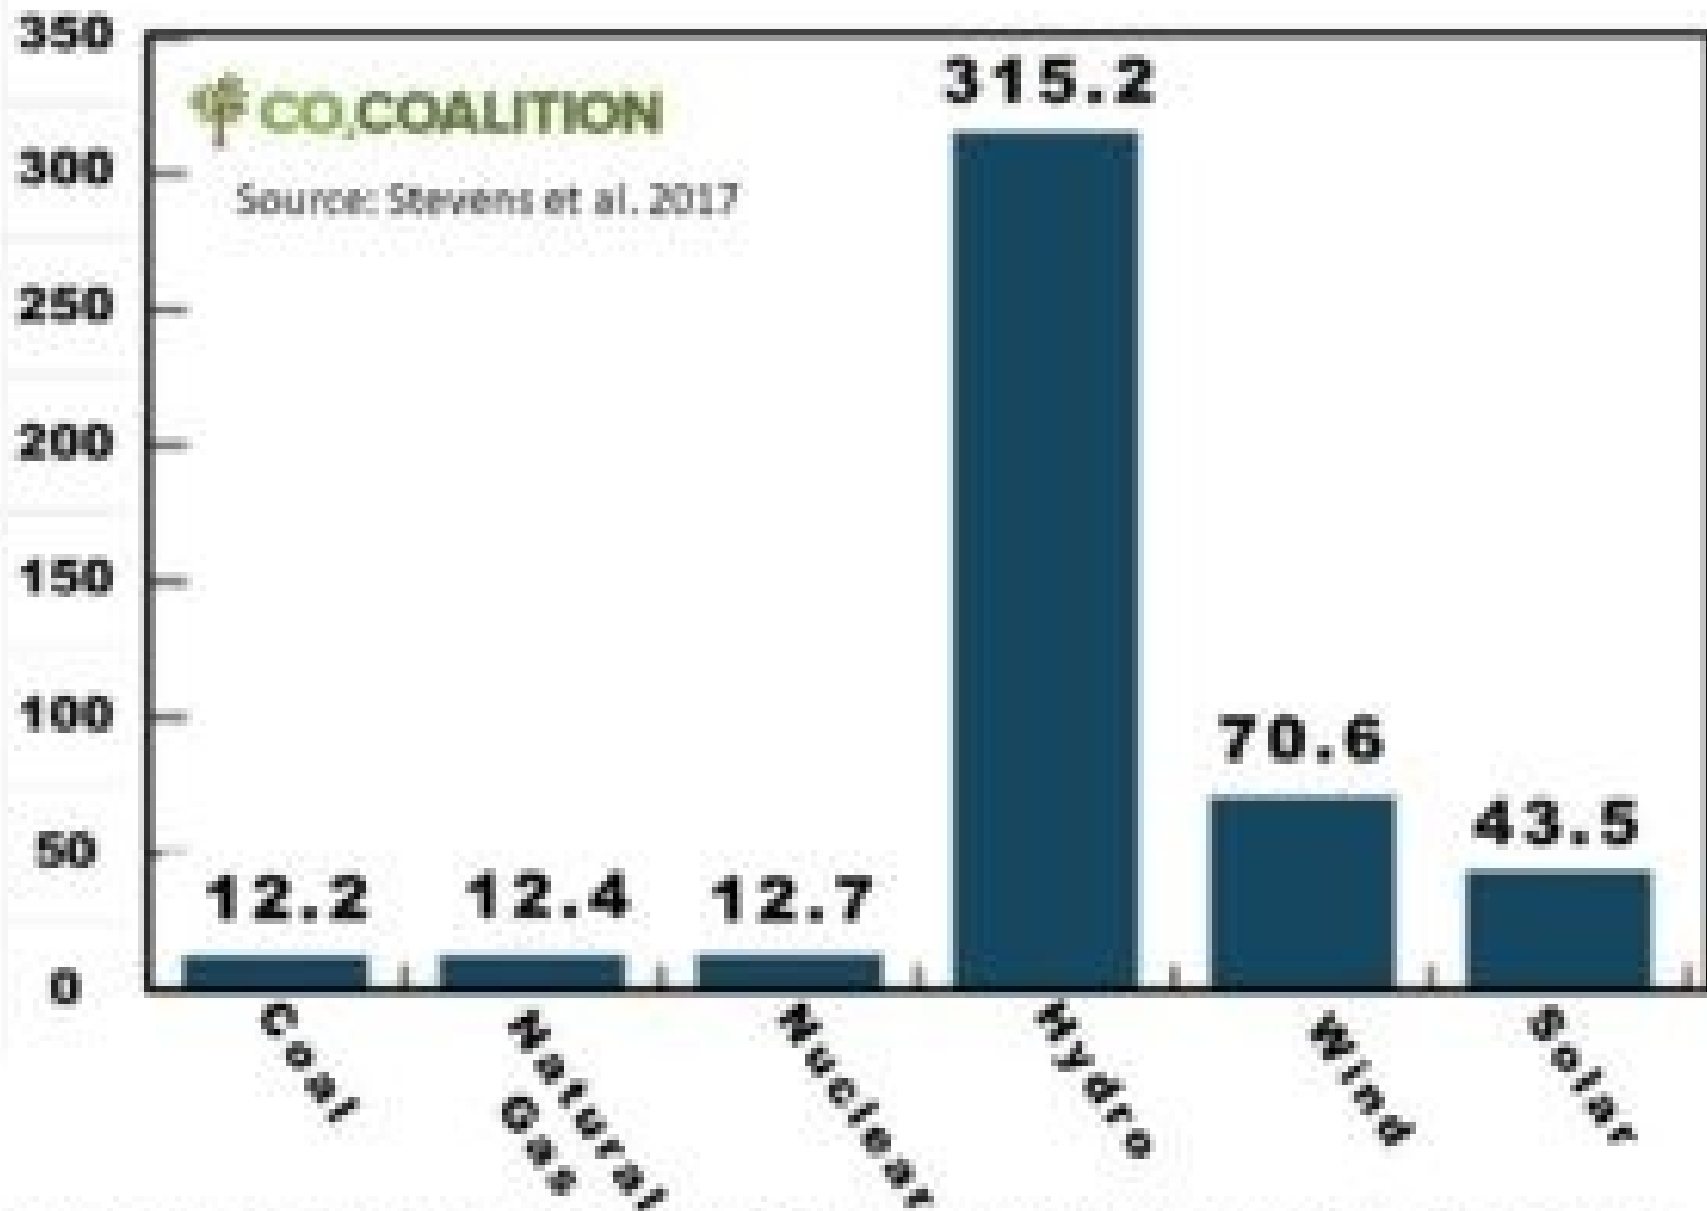

Metals Demand for Clean Energy

Metals demand for clean energy technologies compared to other power generation sources

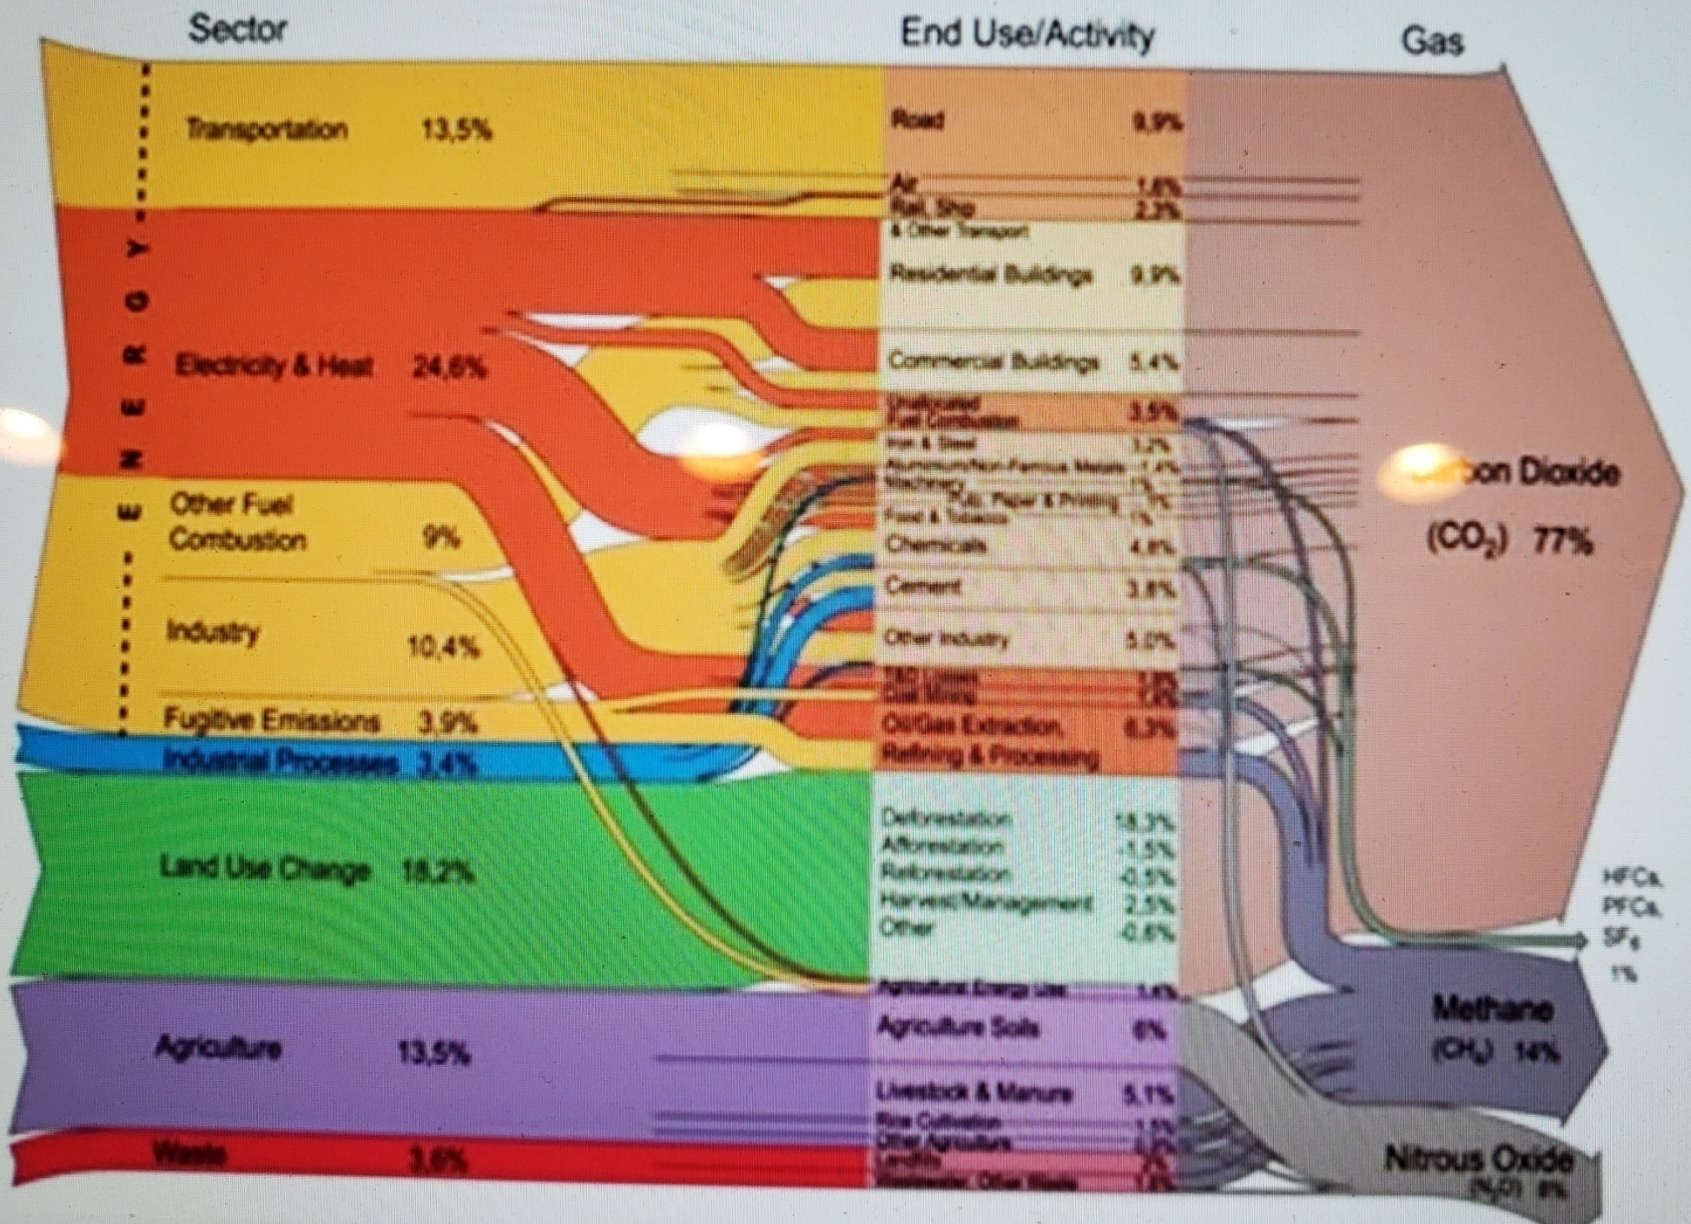

Source: IFA 2012, [The Role of Critical Minerals in Clean Energy Transition](#)

Total Acres per Megawatt

Physical footprint per megawatt of energy produced using various energy technologies

Mitigation = Reducing GHGs

U.S. primary energy consumption by energy source, 2021

total = 97.33 quadrillion
British thermal units (Btu)

total = 12.16 quadrillion Btu

Data source: U.S. Energy Information Administration, *Monthly Energy Review*, Table 1.3 and 10.1, April 2022, preliminary data

Note: Sum of components may not equal 100% because of independent rounding.

Energy consumption by source, World

Primary energy consumption is measured in terawatt-hours (TWh). Here an inefficiency factor (the 'substitution' method) has been applied for fossil fuels, meaning the shares by each energy source give a better approximation of final energy consumption.

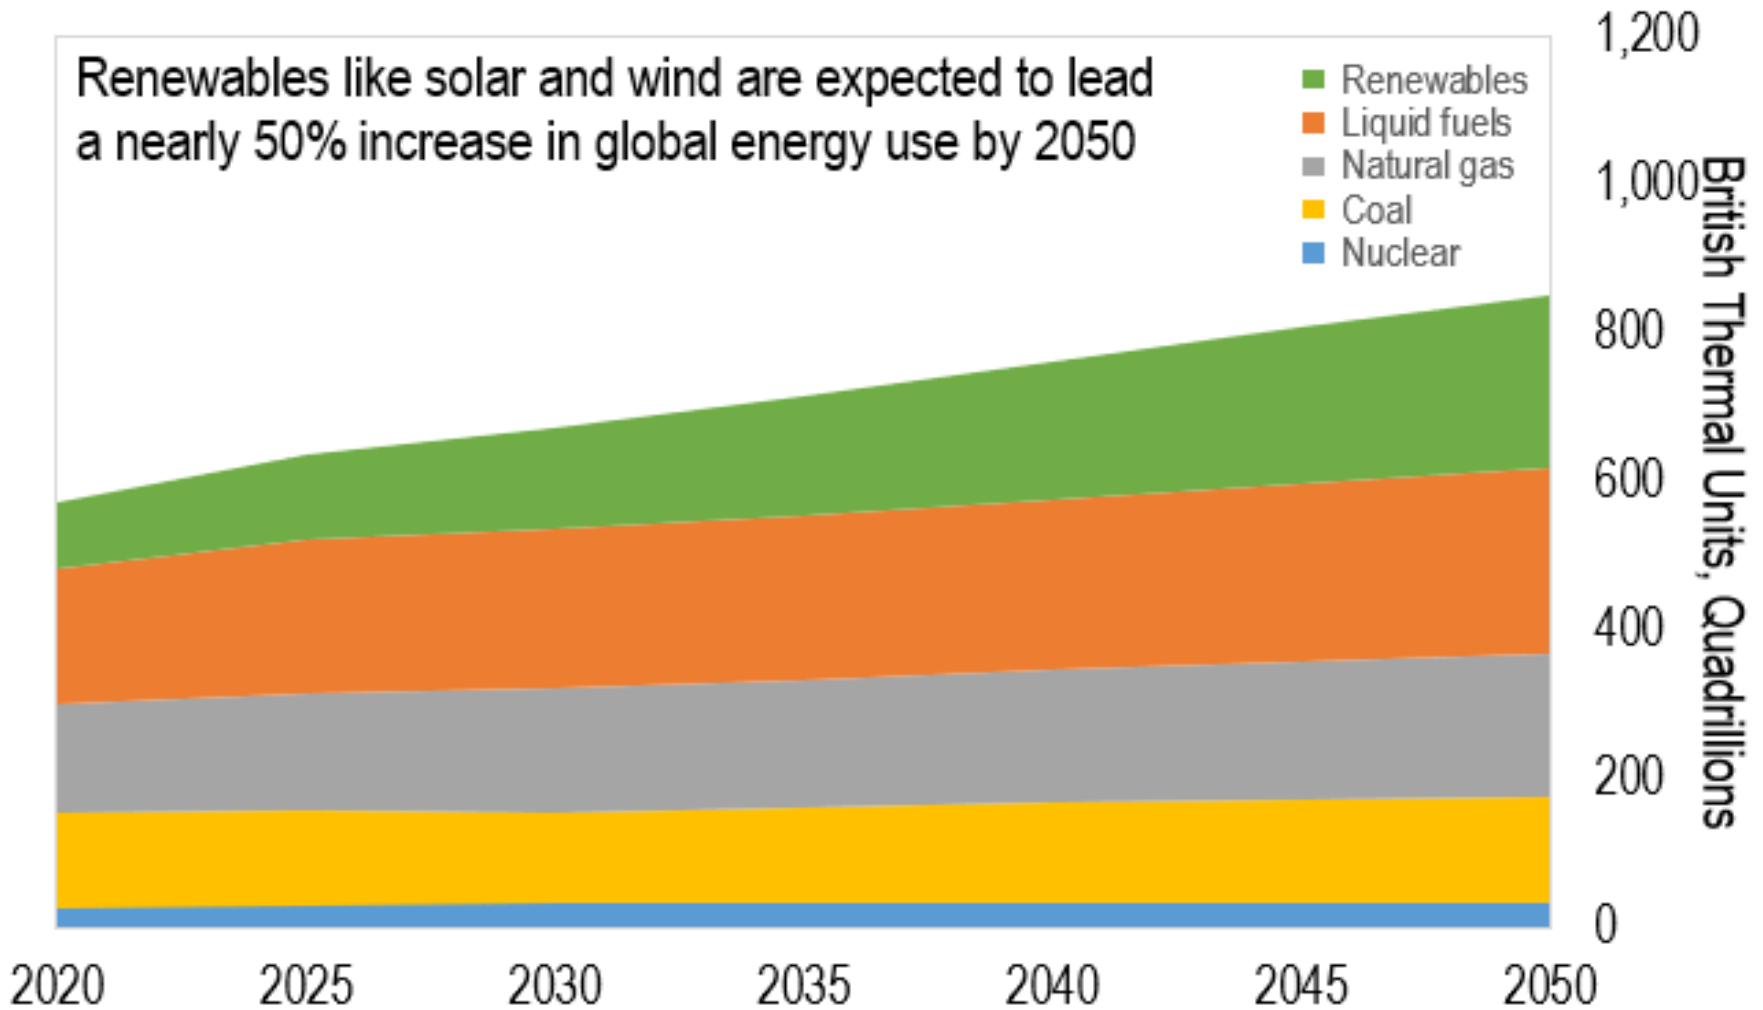

↔ Change region Relative

Source: BP Statistical Review of World Energy OurWorldInData.org/energy • CC BY
Note: 'Other renewables' includes geothermal, biomass and waste energy.

Global Primary Energy Consumption by Energy Source

Sources of U.S. electricity generation, 2021

Total = 4.12 trillion kilowatthours

wind	9.2%
hydro*	6.3%
solar	2.8%
biomass	1.3%
geothermal	0.4%

Global primary energy consumption by source

Primary energy is calculated based on the 'substitution method' which takes account of the inefficiencies in fossil fuel production by converting non-fossil energy into the energy inputs required if they had the same conversion losses as fossil fuels.

Relative
